

CyberSIEM Security Report

Type: Daily Security Summary | Scope: 2026-06-04 00:00:00 to 2026-06-05 12:10:36 | Generated: 2026-06-05 12:10:36

1. Executive Summary

During the reporting period from 2026-06-04 00:00:00 to 2026-06-05 12:10:36, CyberSIEM monitored host security logs, network sockets, firewall profiles, USB storage endpoints, and system resource metrics. A total of **7** Windows security/system logs were processed. The event correlation engine registered **2** total alerts, including **2** CRITICAL severity alerts and **0** HIGH severity alerts requiring immediate response.

2. Threat Statistics & Alerts

Severity	Triggered Count	Status Description
Critical	2	Immediate actions sent via Email
High	0	Urgent operational investigations
Medium	0	Standard monitoring metrics
Low	0	Informational logs / audit marks

3. Operational Monitoring Summary

Monitoring Component	Metric Summary
Failed Login Attempts (Event ID 4625)	6 attempts detected
File Integrity Modifications (FIM)	0 file modifications logged
USB Storage Device Events	0 insertions/removals
Windows Defender Firewall Events	0 policy state shifts

4. Recent High/Critical Threats Details

Time	Severity	Details
2026-06-05 06:40:36	Critical	Brute Force Attack Detected: 6 failed logins in the last 5 minutes.
2026-06-05 06:40:36	Critical	Log Tampering Detected: Windows Security Audit Log was cleared (Event ID 1102).

5. Hardening & Security Recommendations

- **Failed Logins:** Monitor failed login sources. If failures target a specific user, enforce password resets or MFA policies.
- **USB Hardware Restrictions:** Restrict USB mass storage devices via Windows Group Policy Objects (GPO) to prevent data exfiltration.
- **File Integrity:** Regularly audit modifications in critical application directories. Investigate any unapproved execution files.
- **Firewall Profile Stability:** Ensure public/private host firewall states are maintained as 'ON'. Auto-remediate disabling actions.
